

## Product Advisory

### Glass Lined Eccentrics (Fig. 601 - GL)

Milliken eccentric plug valves are now available with a specially formulated internal porcelain coating or 'glass lining,' for handling sewage, grease, scum and sludge in wastewater treatment plants.

This glass lined Millcentric (Fig-601-GL) is extremely resistant to adherence of grease, 'struvite' or salt deposits which can lead to excessive wear, downtime and substantially effect flow coefficients leading to operational inefficiency.

The Millcentrics full flow area, in conjunction with the durability and resistance to corrosion and abrasion of glass lining, make the 601-GL an excellent product for installations that may be prone to interior 'build up' as those described above.

Contact Milliken for specification information concerning the 601-GL.

Other Milliken products, such as the Flex Check, are also available with glass-lined interiors.
